CAREER OBJECTIVE

I am an computer science undergraduate with a passion for problem-solving and coding. My enthusiasm lies in software engineering and web development, and I am keen to use my abilities to create innovative software solutions. I am prepared to take on challenges and significantly contribute to team goals, all while maintaining a strong focus on quality and teamwork.

PROJECTS

Finance tracker using python GUI concepts
Developed a finance tracker GUI application using Tkinter in Python to manage personal finances, including tracking income, expenses, and generating summary reports. Ensured a user-friendly interface and efficient functionality.

Student management system using Java
Developed a Java-based student management system to streamline academic administration, featuring student registration, grade tracking, report generation, and data persistence by saving to a file.

Online education website using HTML,CSS,JavaScript
Created the front end for EduSphere, an online education platform, utilizing HTML, CSS, and JavaScript. The website features interactive lessons, responsive design, and user-friendly navigation.

CERTIFICATIONS

Sololearn Web Development
Completed a Web Development course on Sololearn, demonstrating proficiency in front-end development.

JAVA Basics
I completed a Java basics course on Hackerrank, solidifying my understanding of core Java concepts and programming fundamentals.

Python Development
I completed a Python development course on Coursera, solidifying my understanding of core python concepts and programming fundamentals.
